Paper Prototypes

Prototype 1

A landing page that forced users to make a choice immediately without any context – going to a resources or schedule page by clicking on the right and left side of the page, respectively. Schedule would be a textual list of events with their relevant information, and resources would be venues and facilities displayed on a map. A slide in menu could be opened at any point to reference events that can be saved per-user.

Prototype 2

Opens to the map as a common point for displaying resources and events (venues). Details pages are available for events, particular event modals, city resources, and a personal schedule. Consistent navigation through a side panel menu. Attempts to keep everything navigable at a glance while allowing avenues for filtering.
